

Mikto-Arm Star Polymers For Delivery of Therapeutic Agents

Categories

[Wellness, Medical and Healthcare](#)

Technology & Applications

This invention is related to mikto-arm star polymers for delivery of therapeutic agents, and more specifically to the delivery of hydrophobic drugs and nutraceuticals used in the treatment of a medical condition and/or as dietary supplements.

Advantages

Basically, the use of mikto-arm star polymer indicate several performance including;

- Improved loading capacity of hydrophobic cargoes which increase the efficiency of drug delivery.
- Increase water solubility.
- Preferably biodegradable and/or biocompatible
